

Corrosion Service was founded in 1950 by Thomas R.B. Watson as the first Canadian firm to specialize in cathodic protection. Our founding philosophy was based on the principles of providing great customer service and developing a deep understanding of customer needs, these same core principles still guide our company today.

Throughout our history we have always been privately owned by successive groups of employees that have risen through the organization. This ownership structure gives us a unique perspective on business and ensures that our stakeholders (customers, employees and partners), rather than shareholders, always come first. This is vital for a company such as ours, given that we exist primarily to protect the environment, our citizens and the prosperity of the communities in which we live.

Position: System Specialist – Cathodic Protection

GENERAL FUNCTION:

The successful candidate will support the Engineering Services department. This position is located in the Markham office.

RESPONSIBILITIES:

- Utilizing basic engineering principles and corrosion theory to provide design, installation, commissioning and maintenance documentation of cathodic protection systems in the forms of reports, drawings, and the like.
- Generate detailed technical compliance reports, detailed design drawings and QA forms to demonstrate the requirements of the designs for clients.
- Coordinate and complete the engineering project tasks according to scope and schedule.
- Review and analysis of site data collected by field personnel.
- Work closely with the project managers to meet or exceed our customers' expectations.
- Coordinate design reviews and creation of QA/QC documentation for projects.
- Depending upon experience, train and oversee the development of other junior project team members.
- Provide customer support, build customer relationships, and work with customer on site may be required.
