

Corrosion Service was founded in 1950 by Thomas R.B. Watson as the first Canadian firm to specialize in cathodic protection. Our founding philosophy was based on the principles of providing great customer service and developing a deep understanding of customer needs, these same core principles still guide our company today.

Throughout our history we have always been privately owned by successive groups of employees that have risen through the organization. This ownership structure gives us a unique perspective on business and ensures that our stakeholders (customers, employees and partners), rather than shareholders, always come first. This is vital for a company such as ours, given that we exist primarily to protect the environment, our citizens and the prosperity of the communities in which we live.

Position: QUALITY SPECIALIST

General Function:

With the right balance of knowledge and experience in the quality engineering and auditing professions; the Quality Specialist will support the maintenance and ongoing improvement of the organization's QMS to ensure products and services meet customer requirements and exceed expectations.

This position is based in Edmonton, Alberta and is not eligible for relocation assistance.

Responsibilities:

- Support the maintenance and ongoing improvement of the quality management system in alignment with ISO 9001:2015.
- Follow established quality management principles and quality engineering practices to drive organizational excellence.
- Conduct internal and supplier quality audits.
- Support regional managers in monitoring KPIs, and report on quality system performance.
- Ensure appropriate statutory, regulatory and customer quality requirements are incorporated at the project planning phase.
- Write project-specific quality plans.
- Support the Project Manager and project team in achieving project quality objectives and ensuring turnover of customer quality records.
- Facilitate corrective action and assist the regional managers in effectively resolving customer quality issues (NCRs).
- Collaborate with the Supply Chain and Operations teams to manage supplier/contractor quality.
- Perform quality testing, inspection and analysis of products/services for compliance with stated requirements, ensuring control of nonconforming product/material.
- Work closely with the Operations teams to manage equipment calibration.
- Develop and deliver appropriate quality training.
- Identify opportunities for improvement and coordinate continual improvement initiatives.
- Research, evaluate and recommend new approaches to quality.
- Some travel required, mainly within Canada.

**Qualifications:**

- Bachelor's Degree in Quality/Industrial Engineering.
- Certified Quality Engineer and/or Certified Internal Auditor (ASQ or equivalent) is desirable.
- ASQ/APEGA/NACE member in good standing.
- 5+ years proven work experience in a similar role in the energy sector.
- Working knowledge of ISO 9001:2015 and proficiency with quality management principles, quality engineering practices, recognized quality tools and improvement methodologies.
- Proven experience as a Quality Specialist/Quality Engineer performing data analysis, inspection/test, supplier quality engineering, project management, document control, risk management, problem-solving and process improvement.
- Proven experience as a Quality Auditor conducting internal and supplier audits.
- High proficiency in technical writing.
- Confidence and competency to train/coach others.
- Works independently under minimal supervision.
- Valid driver's license required.
